OCEANOGRAPHIC DATA PLATFORM

» Model ODP-276-100-0

The SOSI Model ODP-276-100-001 Oceanographic Data Platform (ODP) is a multi-sensor seafloor device designed to provide long-term sea water temperature and conductivity measurements. The ODP additionally profiles the overlaying water column and directional wave spectra. Our specialized design incorporates a removable instrument plate that is used to secure the sensors and external battery packs on a concrete anchor base. This unique and proven design allows the instrument plate to be removed while leaving the anchor base on the seafloor—in turn allowing long-term, multi-year deployments in exactly the same location with out drift. These stable and secure seafloor platforms are supplied complete with an anchor base, removable instrument plate, sensors with our Trident data loggers, external battery pack and all other required components for operation.

Thank you for reviewing the Oceanographic Data Platform. Please contact our helpful technical staff if you require assistance with this product. Our team of skilled engineers, designers and trained technicians are ready to assist you with product modifications and solutions to meet your most demanding requirements.

Be it an existing product or a customized package—our mission is to offer innovative engineering, design and quality manufacturing for our diverse and growing global customer base. Take action and make waves with SOSI today! **SOSI**

Technical Specifications

Overall length..... 1,422 mm (56 in.)

Overall width 1,295 mm (51 in.)

Overall height..... 737 mm (29 in.)

Weight..... 595 kg (1,310 lb.)

Options

- 12-Month Alkaline Battery Pack
- 24-Month Dual Battery Packs
- External ADP Gimbal ($\pm 30^\circ$)
- Level Indicator ($\pm 10^\circ$)

*Specifications subject to change
