The SOSI Series STW-1000 Standard Tow Winches are designed for small towed body operations. These winches have a formed plate design and compact shape. Similarly, they contain cable guide sheaves in their levelwind assemblies that can be instrumented for measurement of cable parameters such as line tension and scope. They are highly portable, lightweight and easy to install on your vessel, or vessels of opportunity. Their high quality, rugged aluminum construction and epoxy finish provide long life even in the harshest of marine environments. Their simple, low-maintenance design and proven components insure dependable operation. The Series STW-1000 Standard Tow Winches can be acquired in a variety of drum widths with standard and optional features as listed below.

Thank you for reviewing the Series STW-1000 Standard Tow Winch. Please contact our helpful technical staff if you require assistance with this product. Our team of skilled engineers, designers and trained technicians are ready to assist you with product modifications and solutions to meet your most demanding requirements.

Be it an existing product or a customized package—our mission is to offer innovative engineering, design and quality manufacturing for our diverse and growing global customer base. Take action and make waves with SOSI today!
